## SOFTWARE DEVELOPER

An object-orientated/functional programmer in .NET, HTML / CSS, JS/TS, MYSQL and Python using frameworks such as React and Jekyll to make web / mobile apps while integrating with AI such as OpenCode to efficiently understand and optimize the program. Graduated with Honours as a well driven team player, deadline-oriented developer with the ability to problem-solve through research, quickly learning and delivering solutions under tight deadlines clearly and accurately.

## PROFESSIONAL EXPEREINCE

**VR Project Internship, Deakin University** **Nov 2024 – Jan 2025**

- Integrated real-time bike hardware data with **Unity** VR Project for CycleCave system, enabling smooth interaction and accurate live feedback.
- Built a **data-logging pipeline** for the CycleCave database, exporting required telemetry into Excel to meet client deliverables in a day.
- Developed KAT VR walking system, connecting hardware movement to the Unity / VR games in real time and producing documentation for future developers.
- Set up and configured Captury Live motion-capture system, including connecting the multiple cameras for the required app and documenting the work so far for successors.

**Project SunCycle Redback Operations (Capstone), Deakin University** **Mar 2024 – Oct 2024**

- Delivered **Unity** tasks for gamified VR missions and promoted to project leader, managing 20 membered team to complete milestones through sprints.
- Collaborated with senior leaders to define project strategy and execution plans that improved development efficiency.
- Led brainstorming sessions contributing in innovative VR mechanics and gameplay enhancements.
- Facilitated team members, improving overall team efficiency with reducing time within a week in finishing certain tasks.
- Demonstrated leadership, guiding the team of 20 members through critical phases and risk assessments of the project and ensuring timely completion every week. Performed testing, debugging and quality assurance for Unity components to maintain project stability.
- Managed project infrastructure, including source control through GitHub and documented VR work through research about missions and gamified functionalities weekly.

## EXTRA-CURRICULAR ACTIVITIES

**Volunteer (Food Packaging and Inventory), Empower** **May 2025 – Present**

- Collaborated with a team of 10 members to effectively sort and pack more than 100 food packages, showcasing strong organizational skills, attention to detail and effective coordination.

- Collaborated in a small team of 2 – 3 members in inventory with stacked food stuff on shelves for customers in real time to ensure it does not run out.
- Acted as a personal shopper for customers, through clear communication while browsing the shelves and accommodating to what food can be taken, how much and so forth.

**Committee, Deakin Volunteering Hub** **Mar 2025 – Oct 2025**

- Drafted the events and volunteering opportunities for DVH in newsletter.
- Coordinated with other volunteers in Edgar's Mission, mucking out animal shelters.
- Coordinated with other volunteers the whole week for Bento's Box, cooking and selling the bento boxes to students.

## EDUCATION

**Bachelor of Software Engineering (Honours), Deakin University** **Mar 2022 – Oct 2025**

- Research thesis on "Machine and Deep Learning for Mental Health Classification"
  GitHub Link: https://github.com/D3lK1ch1/ML-and-DL-Approaches-for-Mental-Health-Classification

## HOBBIES

- Implemented a static website for a writing blog, with comment and search bar to post my writings consistently.
- In-progress apps at GitHub from my own problems or real-life problems out of friendly conversations:
  - Navigation routes to combine both PTV and multi stop routing
  - Parsing a bank transaction PDF to track my monthly finances for financial budgeting.
  - Creating a proof of concept for integrated in-tune hearing to attract / repel kangaroos and direct them away from main roads leading to kangaroo deaths and back to their habitats.
