PROFESSIONAL SUMMARY

Graduate Software Engineer with Honours. Background across full stack development with familiarity in VR and hardware integration. Builds practical software solutions by combining technical problem-solving skills with a strong focus on user needs, especially in privacy and security.

TECHNICAL SKILLS

Core: JavaScript, TypeScript, React / React Native, Next.js, Python

Familiar: C#, Rust, PHP, HTML/CSS

Tools & Practices: Git, CI/CD, Unity, Agile/Scrum, Technical Documentation, Claude Coder, Spec Driven Development, Project Management

PROFESSIONAL EXPERIENCE

Software Engineer | *Enspyr Pty Ltd*

May 2026 – Present

- Investigated a Flutter mobile app with Firebase database matching donated hearing aids for recipients to observe and understand issues before solving them for app progression through milestones.
- Coordinated with tech lead and client to establish ongoing priorities and project context so that **milestones can be accomplished** in time without misunderstandings.
- Investigated **Android build feasibility** for an iOS-primary codebase pushing for an alternate platform with the tech lead so that Android users can benefit from the app.
- Observed the beta states of the app from TestFlight to flag any UI/UX issues, fix and test them for review for **better user experience** before client deadlines to satisfaction.

Software Engineer Intern | *Cultural Infusion*

Apr 2026 – July 2026

- Operated as sole developer on defined project scope and deliverables without a pre-set brief, and delivered the result as a production SDLC automation component.
- Extended an **open-source tool** with a custom plugin to auto-create Azure DevOps tickets from detected SEO issues personalized for the company's workflow compared to paid SEO tools, saving time and money.
- Implemented an **agentic AI workflow** into the tool to automate the process with a human in the loop from site crawling, filtering issues, directly updating the WordPress site and crosschecking to ensure it is fixed cutting down manual processes for the users.
- Maintained a **full change log and developer documentation** for all modifications to the open-source codebase for future developers to understand and further work on the tool.

VR Software Developer (Internship) | *Deakin University*

Nov 2024 – Jan 2025

- Integrated real-time bike hardware telemetry into Unity VR for the CycleCave system, enabling accurate live feedback.
- Built a **data-logging pipeline** to export CycleCave telemetry to Excel, delivering client reporting requirements within a day for quick assessment for further progress.
- Developed a KAT VR walking system bridging hardware movement to Unity games in real time with developer handover docs for future developer to work the project with ease.
- Configured a Capture Live multi-camera motion-capture system end-to-end and documented setup for successors to know what has been done or not and continue effectively.

Project SunCycle Redback (Capstone) | *Deakin University*

Mar 2024 – Oct 2024

- Promoted to project leader over a 20-member team; managed sprint planning, milestone delivery, and risk assessments to deliver the VR Suncycle project demo.
- Collaborated with senior stakeholders to define strategy and execution plans, measurably reducing task completion time.

- Delivered **Unity** VR mission features and gamified mechanics, performing testing, debugging, and QA throughout for a working game that became a part of the project.
- Managed **source control via GitHub** and produced weekly research documentation on VR mission design so the team can be up to date without causing confusion.

EDUCATION

Bachelor of Software Engineering (Honours) | *Deakin University* Mar 2022 – Oct 2025

Research Thesis: Machine and Deep Learning for Mental Health Classification – Researched machine learning, deep learning and feature selection combinations on mental health datasets to find results on which model combination works best for diagnosis and even prediction for possible prevention.

PROJECTS

Prospect Scout (Job Scout Researcher) | *Python, FastAPI, OSM*

- Research aid parsing through companies based on location logged into profile UI with sector and roles to find undiscovered companies worth a possible outreach with generated report with case study links and CTO contact to build rapport.

Nav Melb (Multi-Modal Navigation App) | *React Native (Typescript), Node.js, PTV API*

- Mobile navigation app focusing on **waypoint chaining** to manually connect public transport with driving in order to predict when reaching station without choosing either just those two options, giving users more options to plan their journey.

Bank Transaction Tracker | *Next.js, PDF parsing, data visualisation*

- Upload a bank statement PDF and get a **visual calendar breakdown** on monthly spending, also based on category where users can figure out every detail from merchant, category and date their money was spent to budget plan in the future

Browser Tab Accountability Extension | *TypeScript, Tauri, Rust*

- Desktop app tracking time spent in browser tabs and applications, surfacing usage patterns generated into a report as a log to their Internet habits and work around it.

Disk Clean Checklist | *C#, .NET*

- More than filtering through OS, true **disk folders clean via checklist** with node_modules or similar and AI chat files with agents for reclaimable space after user reads through why it can be deleted, decide upon themselves that reduces risk.

VOLUNTEERING & COMMUNITY

Food Packaging Volunteer | *Empower* May 2025 – Present

- Sorted and packed 100+ food packages per session and restocked inventory in a 10-person team.
- Acted as personal shopper for clients, balancing individual needs against available stock.

Committee Member | *Deakin Volunteering Hub* Mar 2025 – Oct 2025

- Drafted event and volunteering opportunity listings for the DVH newsletter.
- Coordinated volunteers across Edgar's Mission, Bento's Box, and other campus community events.
